

The Reformational Publishing Project

Technology and The Future, by the well-known Dutch philosopher Egbert Schuurman, represents the first volume, of what we hope will be many published by The Reformational Publishing Project. The Project is dedicated to translating and/or publishing books that are clearly grounded in the Christian Philosophical legacy of Herman Dooyeweerd. Dooyeweerd's Christian Philosophical corpus represents what is arguably the foremost systematically coherent Biblically grounded analysis yet to appear in any language.

Technology and The Future is an excellent example of the sort of analysis that is possible on the basis of this Christian philosophy. This book also represents the first of two volumes that will be published by The Project. The second volume, *Reflections on Technology and Culture*, is based on the theoretical work of the first volume but will focus more immediately on a broad range of technological issues in current society, as well as some more specialized issues in Medical Ethics, Bio-Engineering, and Agriculture. It will also treat a number of issues in the current debates on Creation and Evolution. Finally, the book will contain the farewell lecture of Prof Schuurman entitled, *The Challenge of Islam's Critique of Technology*. We anticipate that this volume will appear later this year.
